EDUCATION

Duke University

Durham, NC

B.S. in Computer Science. NCWIT Award for Aspirations in Computing; MIT Medlytics Energetic Innovator Award; JPMorganChase Career.edYOU Academy; Goldman Sachs Emerging Leaders Series. GPA: 4.0.

May 2029

Relevant Coursework: Data Structures & Algorithms, Computer Architecture, Computer Systems, Files & Databases, Artificial Intelligence, Discrete Mathematics, Linear Algebra, Probability

SKILLS

Languages: Python, Java, C, TypeScript, JavaScript, SQL, HTML/CSS

Frameworks/Libraries: Spring Boot, Node.js, React, Angular, Flask, TensorFlow, PyTorch, NumPy, Pandas

Tools/Platforms: Git, Docker, Linux, CI/CD

EXPERIENCE

Software Engineer Intern

June 2026 – August 2026

MetLife

- Built full-stack enterprise features with Java, Spring Boot, TypeScript, and Angular, implementing REST APIs, backend validation, and service-layer logic supporting 1,000+ users.
- Developed AI agent evaluation frameworks and Agent-to-Agent workflows using Python, LLM APIs, and SQL pipelines, automating benchmarking, regression testing, experiment tracking, and evaluation reporting.
- Improved platform reliability across Linux environments, cloud infrastructure, and CI/CD pipelines, contributing to an 18% reduction in deployment-related issues.

Software Engineer Intern

July 2025 – August 2025

State of North Carolina Government

- Built and optimized backend APIs and SQL queries for internal government data systems, improving query response speed and reporting accuracy by 45% across enterprise workflows.
- Containerized application workflows with Docker and contributed to CI/CD pipeline improvements, increasing deployment efficiency and system reliability.
- Partnered with 5+ IT divisions to translate operational requirements into backend services and automated reporting workflows.

AI/Full Stack Engineer Intern

July 2024 – November 2024

MIT Mantis AI

- Engineered a Python, React, and Node.js platform to ingest, process, and visualize 2M+ records from unstructured datasets, delivering real-time analytics dashboards.
- Built 5+ AI-powered agent interfaces integrating model-generated recommendations, interactive workflows, and personalized feedback, increasing user engagement by 25%.

Software Engineering Intern

July 2024 – August 2024

Massachusetts Institute of Technology, BWSI

- Built Python and TensorFlow preprocessing and model-training pipelines across 5 biomedical ML projects spanning medical image classification and physiological signal analysis.

PROJECTS

Emerge AI emergeai.us

The Cube LLC 2025 Buildathon, 3rd Overall

- Engineered an end-to-end AI interview simulation platform using Flask, React, and OpenAI APIs, integrating real-time voice interaction, transcript analysis, automated scoring, and personalized feedback across 200+ mock interviews.
- Designed the backend evaluation pipeline to process transcripts, score behavioral responses, and generate real-time coaching recommendations, reducing manual review effort by 70%.

Monte Carlo Mutual Fund Simulator

Python, NumPy, Pandas

- Built a Python Monte Carlo simulation engine using NumPy and Pandas to generate thousands of potential mutual fund return paths from historical return and volatility distributions.
- Developed portfolio risk analytics to compare expected returns, downside risk, and investment outcomes across configurable time horizons and market assumptions.
